Bridge: submission map and progress tracker

FDU AI Experiential Learning Lab team · Track 1, Smart Healthcare · Prepared 11 November 2026

The one thing to understand first

> The IBM guide, page 11, states it plainly: **weekly tasks are not mandatory.** Only two deliverables are.
>
> - **The Week 6 mid-program checkpoint. Submitted 11 November 2026.** The confirmation page states the team is now eligible for the IBM SkillsBuild Career Fair.
> - **The Week 10 final submission. Outstanding.** Four items, listed below.
>
> Everything else, the weekly Solution Design work, is optional practice that feeds the final submission. It is worth submitting because it builds the argument, but nobody fails the lab for skipping it.

Three different places things get submitted

These are genuinely different destinations. Sending the right thing to the wrong one is the easiest mistake to make here.

What	Where	Status
Weekly deliverables, weeks 1 to 5 (Solution Design)	`https://wkf.ms/4sDluV8` Microsoft Form	Optional. Deck is ready to upload.
Week 6 mid-program checkpoint	`https://wkf.ms/4eG6Gjv` resolves to forms.monday.com	**Done, 11 Nov 2026**
Final project submission	`compete.072603.watsonx-challenge.ibm.com/competitions/ell-us-2h26/teams` the My Team page, Submissions section	**Outstanding**

The final submission, four items

#	Item	Where it is now
1	Video demonstration, 3 minutes	**Not recorded.** Script with shot list and narration is in `docs/demo_video_script.md`. Upload to YouTube as unlisted or public, never private, then test the link in a private window.
2	Written problem and solution statement, plus a link to the working prototype	**Ready.** `docs/problem_and_solution_statement.md`, 490 words. Paste the text below the horizontal rule only. Prototype link is the repository.
3	Written statement on technology	**Ready.** `docs/technology_statement.md`, 487 words. No brackets left to fill.
4	Bob task session reports in the code repository	**Done.** Seven screenshots in `bob_sessions/` plus `task_log.md`. The guide requires the folder to be named exactly `bob_sessions`. It is.

If you revise anything after submitting, resubmit all four. The most recent submission is the one that counts.

How you will be scored

20 points, averaged across evaluators. It is not a competition and teams are not ranked; the score exists to give you feedback.

Criterion	What Bridge offers against it
Completeness and feasibility (5)	A working end to end system, not a mock up. 56 passing tests from a clean clone. Two committed evaluation runs. IBM Bob and watsonx.ai both used and evidenced rather than named.
Creativity and innovation (5)	Ranking on change against each patient's own baseline rather than a population score. Silence treated as a signal. Escalation structurally separated from ranking so safety cannot be out-prioritised.
Design and usability (5)	One screen, five names, a one sentence reason and an evidence trail. Approval queue, degraded banner, open case and gone quiet filters, mobile readable evidence.
Effectiveness and efficiency (5)	8 of 9 seeded deterioration events detected on the rule engine, 9 of 9 with Granite, false positives unchanged. Zero urgent replies deferred. 0 of 1,075 ranked entries missing a reason or evidence.

How to check your progress

Per person, for the certificate

Completion is individual, not a team outcome. Each member must separately finish:

- The mandatory self-paced SkillsBuild courses, in the learning plan at `skills.yourlearning.ibm.com/activity/PLAN-9EA316BCA5D5`

- The instructor-led sessions, attended live or watched as recordings, **and marked complete** on the activity. Watching without marking does not register.

Check this on your own SkillsBuild profile. Anyone who has not finished their own plan does not complete the lab, no matter how good the team submission is.

Per team, for the project

The My Team page on the compete platform shows team members and the Submissions section. Coaching sessions are weekly by invitation to your registered email; office hours run weekly during the build phase.

One thing still open, one now settled

> **The deadline is settled: 22 November 2026.** Confirmed by Chiamaka in the team Slack channel on 11 November, referring to "the final project deadline (November 22)". The 8 November date on the Complete the learning lab page does not govern. A further instructor-led session, How to Present Your AI Agent, runs 12 November at 12:00 PM EST and is worth attending before recording the demo.
>
> **Ajay is not on the roster.** The team page shows five of five without him. Only registered members receive the certificate and the Career Fair invitation. If that needs correcting, raise it now; team changes locked on 9 October, so it needs a coach.

What is left, in order

1. Record the 3 minute video from the script. This is the only substantial piece of work remaining.
2. Upload it unlisted or public, then open the link in a private window to confirm it plays.
3. On the My Team page, paste both statements, the video URL and the repository URL, then submit all four together.
4. Optional, worth doing: upload the Solution Design deck to the weekly form.
5. Attend the 12 November session on presenting your AI agent, then record.
6. Each member: finish and mark complete their own learning plan.

Every claim about the repository in this document was verified against a fresh anonymous clone of `github.com/likithaseepelly/bridge-ibm-skillsbuild` on 11 November 2026: 56 tests passed in 4.5 seconds with no credentials, and a sweep of the full git history found no keys or tokens.
